THE CANADIAN FORESTRY SERVICE GOVERNMENT OF CANADA

The Canadian Forestry Service is the principal source of federal expertise in forestry and has been designated as the government's lead agency for forestry matters. Its general objective is to promote the wise management and use of Canada's forest resources for the economic, social, and environmental benefit of Canadians.

The following are the main functions of the CFS:

1. Coordination of federal policies for the promotion of better resource management and forest industry development.
2. Provision of scientific and technological leadership in forestry through research and development.
3. Provision and analysis of national and international statistics and information as a basis for policy formulation.
4. Development and certification of codes and standards for wood product performance.
5. Protection of Canada's forests from foreign pests.
6. Fostering the potential use of the forest resource for energy.
7. Contributing to the environmental objectives of the Government of Canada.

Canadian Forestry Service programs are coordinated with those of other forestry agencies through a variety of mechanisms, including the Canadian Council of Forestry Ministers, the Forest Sector Strategy Committee, management committees for Federal-Provincial Forestry Development programs, national and regional Research Advisory Committees, and various technical committees for specific program areas.

The Canadian Forestry Service comprises a headquarters unit, six forestry centres, and two national institutes. The forestry centres are responsive to regional priorities and maintain close liaison with the respective provincial government forestry departments and other clients. They also participate in, and frequently lead, national programs. The national institutes provide the focus for programs of national scope.

SERVICE CANADIEN DES FORÊTS GOUVERNEMENT DU CANADA

Le Service canadien des forêts (SCF) réunit la majorité des spécialistes fédéraux en foresterie; il a été désigné comme l'organisme officiel du gouvernement responsable du secteur forestier. Son objectif général est de promouvoir l'aménagement et l'utilisation judicieux des ressources forestières du Canada pour le plus grand bien économique, social et environnemental des Canadiens.

Voici les principales fonctions du SCF:

1. Coordonner les politiques fédérales afin de favoriser l'amélioration de la gestion des ressources et l'expansion de l'industrie forestière.
2. Fournir une orientation scientifique et technologique dans le domaine de la foresterie, par la recherche et le développement.
3. Fournir et analyser les statistiques et l'information nationales et internationales qui serviront à établir les politiques.
4. Mettre au point et homologuer des codes et des normes en matière de rendement des produits du bois.
5. Protéger les forêts canadiennes en luttant contre les ravageurs étrangers.
6. Parrainer l'utilisation éventuelle des ressources forestières pour la production d'énergie.
7. Adhérer aux objectifs environnementaux du gouvernement fédéral.

Les programmes du SCF sont menés de concert avec ceux d'autres organismes forestiers par l'entremise de divers mécanismes dont le Conseil canadien des ministres des Forêts, le Comité de la statégie forestière, les comités de gestion des programmes fédéraux-provinciaux de développement forestier, les comités nationaux et régionaux consultatifs sur la recherche, de même que divers comités techniques axés sur des domaines de programmes spécifiques.

Le SCF comprend une administration centrale, six centres de foresterie et deux instituts nationaux. Les centres de foresterie doivent répondre aux impératifs régionaux et entretenir une liaison étroite avec les ministères provinciaux des Forêts. Ils participent également à des programmes nationaux dont ils assument fréquemment la direction. Les instituts nationaux sont les foyers des programmes d'envergure nationale.

FOREST SECTOR-DEPENDENT COMMUNITIES IN CANADA:

Acknowledgements

I would like to thank the many individuals who contributed to this report: Suzanne Gailloux, of the Economics Branch, was most helpful in the identification of the communities, as were those who provided comments on an earlier draft of the report. Special thanks go to my Director, Mimsie Rodrigue, for her continued support and input into this report.

Forest Sector-Dependent Communities in Canada: A Demographic Profile

Executive Summary

The many challenges facing the forest sector as well as the changes which the forest industry is undergoing have been the subject of numerous studies and discussions in recent years. One aspect, however, that has not been given much attention is the effect of this transformation on single-industry towns.

Forest sector-dependent communities in Canada, as they existed in 1981, are examined in this report. Approximately 900 communities were found to rely on the forest sector to some extent; there were 343 communities that depended almost totally on the forest sector for their livelihood. The average population in these communities was small at 1481; their size ranged from as few as 7 people to as many as 32 905. Only 105 had a population of over 1000. Forest sector-dependent communities were found in every province except Prince Edward Island, with Quebec and British Columbia having the most.

Information was collected for the 105 communities with a population greater than 1000. More specifically, data were collected on the level of education, employment and unemployment, as well as housing. It was found that forest sector-dependent communities tended to be small, but were concentrated in certain areas. The level of formal education was low in these communities when compared to other communities in Canada. Forest sector workers' income was high relative to the average Canadian worker. Fewer women worked in these communities, and those that did, earned significantly less than their male counterparts. The characteristics also varied within the different subsectors in the industry, i.e. logging and forestry, wood, and paper and allied.

It is important to remember that single-industry communities are constantly undergoing changes; changes in their infrastructure, in their economic base and their demographic characteristics. For this reason, this report should be regarded as a barometer rather than a static view of forest sector-dependent communities.

INTRODUCTION

While 75% of Canada's population is concentrated in urban areas, mainly along one narrow strip on the 49th parallel, many Canadians live in rural, often remote, resource-based communities. Their contribution to the economy is significant, although frequently underestimated. To a large extent, the industries in these resource-based communities, through the provision of raw materials, sustain the economy of many larger urban centres.

In 1977, the Department of Regional Economic Expansion (DREE) produced a report entitled "Single Sector Communities," which identified 811 single-industry communities in Canada, 302 of which were forestry-based. Although that number has since been disputed (some would estimate that there are 900 such communities in Newfoundland alone), the fact remains that there are many single-industry communities in Canada which derive their livelihood from the forest sector and very little is known about them.

The Labour Market Development Branch of the Canadian Forestry Service (CFS), undertook to examine this phenomenon in forestry. The first objective was to identify the forest sector-dependent communities in Canada. The second was to create a database to form the basis for analysis of these communities in order to focus future discussions on the subject.

For the purpose of this project, the information collected on the communities was limited to the following:

a) demographics: size, age specific population;
b) level of educational attainment (for those 15 years and over);
c) employment/unemployment: unemployment rate, average income, class of worker;
d) housing: average value of dwelling, tenure.

Background

Although it is generally understood what is meant by a single-industry community, no precise definition exists that allows the communities to be systematically identified and analyzed. In such communities, there is one dominant economic activity, and therefore, the the community and its residents are entirely dependent upon the viability of that one industry. Although the economic dimension is more obvious, the social problems associated with single-industry communities, i.e. exaggerated insecurity, geographic isolation, lack of services, lack of labour mobility, and sometimes, high unemployment and loss of income, are just as significant.

Single-industry communities may be different from economically diversified communities, but they are not all alike - they possess varied characteristics. Studies on the subject indicate quite clearly that identifying the factors that are significant for the communities, and determining the importance of each, becomes a very delicate and subjective exercise. There is also a common misconception regarding single-industry communities that needs re-examination. They are too often viewed as static entities when they should be viewed instead as an evolving process.

Methodology

The methodology used for identifying the communities is an adapted version of the one used by W. White et al. in their report entitled "Forest Sector Dependence in B.C. 1971-1981." The details of the methodology are found in Appendix 1. The Census Subdivisions from the 1981 Census were used as the statistical basis on which to collect information, and for the purposes of this paper, are referred to as communities, even though one statistical entity could represent a number of "places."

The number of communities in a province should not be interpreted as reflecting the importance of the industry in that province. Because the identification of the communities is based on their *labour force dependency* on the sector, only communities where the labour force is concentrated are included. This does not preclude provinces that have few dependent communities from having a very significant forest sector; Nova Scotia is one such example.

The project is comprised of two phases. Phase I involved identifying the communities and classifying them in either of two categories. One category identifies those Census Subdivisions which are considered "forest sector-dependent communities" (FSDCs). These are communities where 30% or more of the labour force works in the forest sector (see Appendix 1 for further details of methodology). The second identifies communities where 15% to 29.9% of the labour force is based on the forest sector.

In Phase II of the project, a profile containing information such as population, education, employment/unemployment and housing was collected for the 105 communities of 1000 people or more. Here again, the 1981 Census data were used.

Organization of the Report

The results of the study, the object of which was to identify the forest sector-dependent communities in Canada and to examine their demographics, are presented in this report.

The lists of forest sector-dependent communities can be found in Appendix 2. They were identified based on their labour force dependency on the sector.

The findings on the demographic profile are presented as a series of charts. The data have been aggregated at the national level as well as by subsector and compared to all communities in Canada. This not only permits a comparison of FSDCs to other communities in Canada, but also highlights the differences within the sector itself. For example, wood-dependent communities differ in certain aspects from paper and allied-dependent communities.

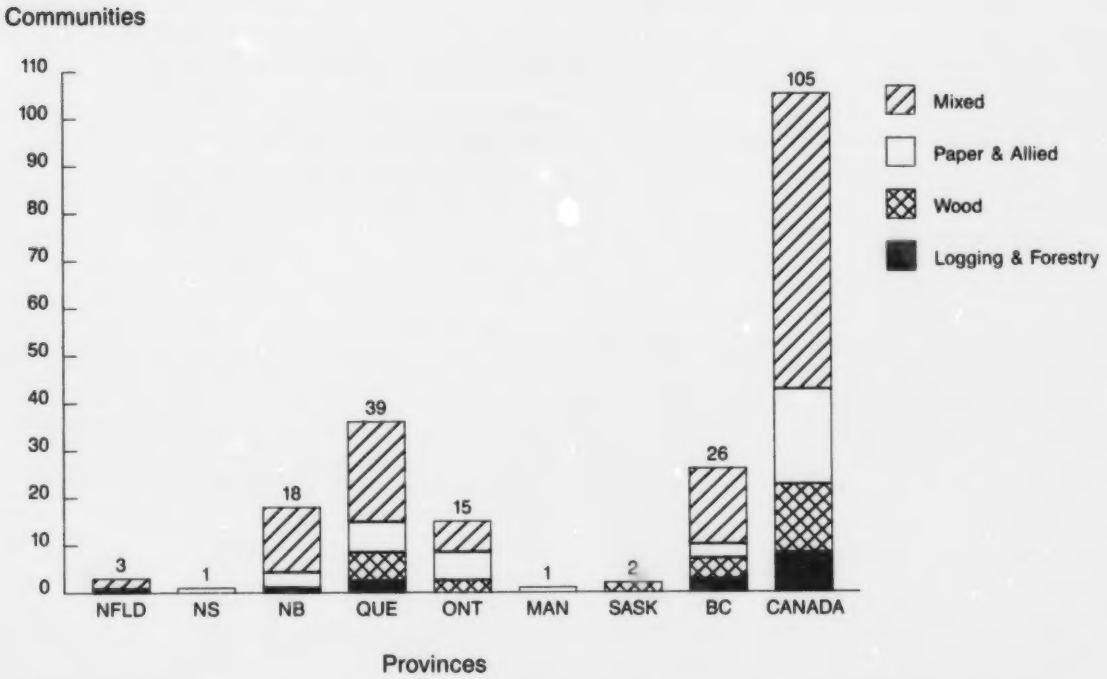
It should be noted that the term "All FSDCs" used in the tables providing subsector information represents the total of all communities that rely on one subsector *and* those that rely on a combination of all three (forestry and logging, wood, and paper and allied industries). The charts providing the detailed information for each province have been included in Appendix 3.

The information for the profile of the FSDCs was collected only on those of 1000 people or more: 70% of the population of all FSDCs reside in these larger communities, 105 in total.

A list of definitions of the various terms and concepts used in this report can be found in Appendix 4.

Findings

Forest Sector-Dependent Communities Distribution



Of the 105 communities, 7 were classified as totally dependent on forestry and logging; 14 were dependent on wood; and 21 relied on the paper and allied industry (at least 30% of the labour force was employed in that subsector). The remaining 63 communities relied on a combination of all three subsectors, referred to as "mixed" in the above table.

Population by Province

	NFLD	NS	NB	PEI	QUE	ONT	MAN	SASK	ALTA	BC	CANADA
Average size	1111	1395	1720	-	2178	3699	2793	2293	-	6730	3414
range	1085-1130		1055-4958		1005-11556	1006-12014		2224-2361		1265-32905	

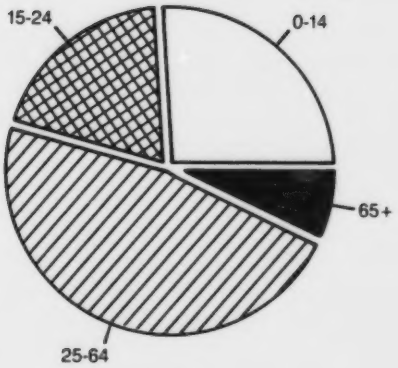
Forest sector-dependent communities tended to be small. Only seven of the communities examined had a population greater than 10 000. Five of those were in B.C., there was one in Quebec and one in Ontario.

Population by Subsector

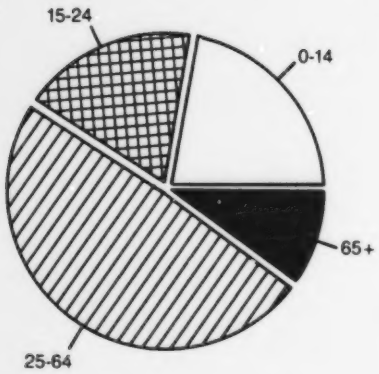
	Logging & Forestry	Wood Industries	Paper & Allied Industries	All FSDCs
Average population	1956	2346	3610	3414
range	1115-2765	1000-5905	1355-13430	

Logging and forestry-dependent communities were the smallest of the FSDCs, their average population being 1956; the paper and allied-dependent communities were the largest with an average population of 3610, slightly above the average for all FSDCs.

Age-Specific Population



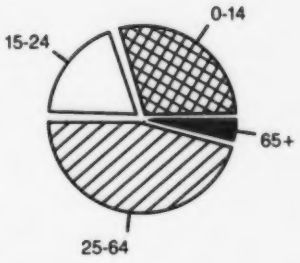
FSDCs



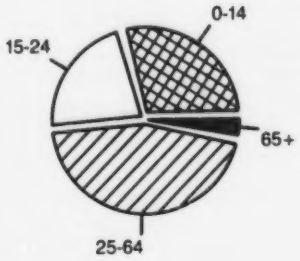
Canada

Note that there was a higher proportion of children (26%) in forest sector-dependent communities than in other communities in Canada (22%). Equally, the proportion of the population 65 years and over was lower in forest sector-dependent communities (7%) than others in Canada (10%).

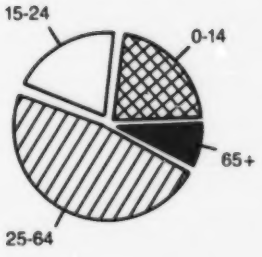
Age-Specific Population by Subsector



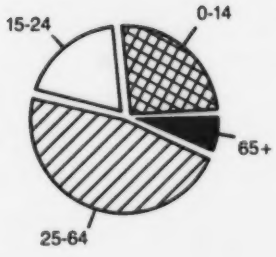
Logging & Forestry



Wood



Paper & Allied

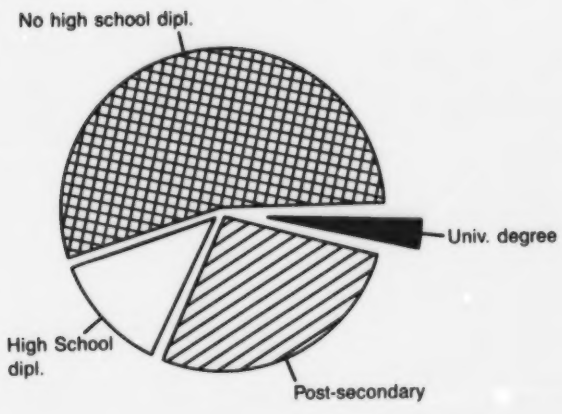


All FSDCs

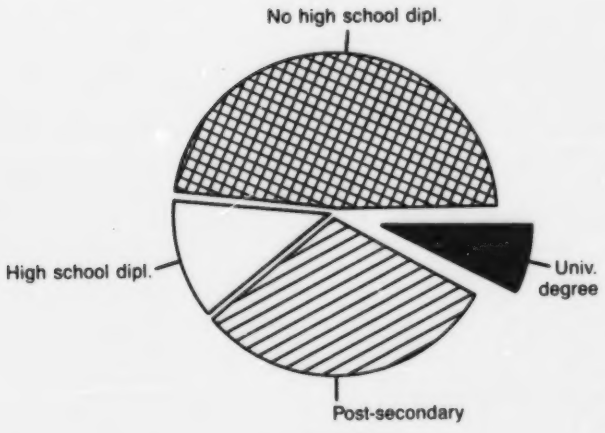
The higher proportion of children in FSDCs was even more noticeable in the logging and forestry-dependent communities and the wood-dependent communities where 30% and 29% of the population was between 0-14 years old. This compared to 22% for all communities in Canada. The paper and allied-dependent communities were much closer to this national average with 23% of their population between 0-14. The relatively youthful population in FSDCs is probably the result of factors such as income or women's participation rate in the labour force; also, many couples may prefer the small community setting to raise a family.

Again, logging and forestry and wood-dependent communities had the lowest proportion of older residents with 4% of the population 65 years and over. That proportion was doubled in paper and allied-dependent communities. This compared to the national average of 10%. As people reach retirement age, they tend to move to centres that offer more and better services, milder climates, etc. Because paper and allied-dependent communities are a bit larger, and therefore, offer more services, the phenomenon was less evident in those communities.

Level of Schooling



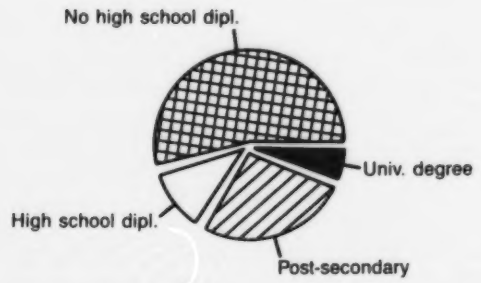
FSDCs



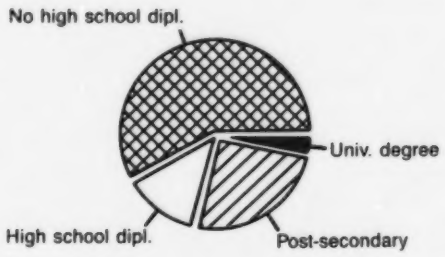
Canada

The level of educational attainment in forest sector-dependent communities was lower than in other communities in Canada. Although this characteristic is not unique to forestry (it is common in rural areas) it has some significant implications. Of the population 15 years and over in FSDCs, 55% had no high school diploma as opposed to the Canadian average of 48%.

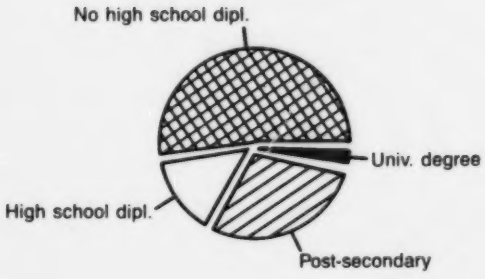
Level of Schooling by Subsector



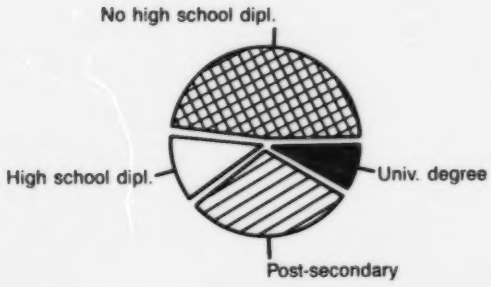
Logging & Forestry



Wood



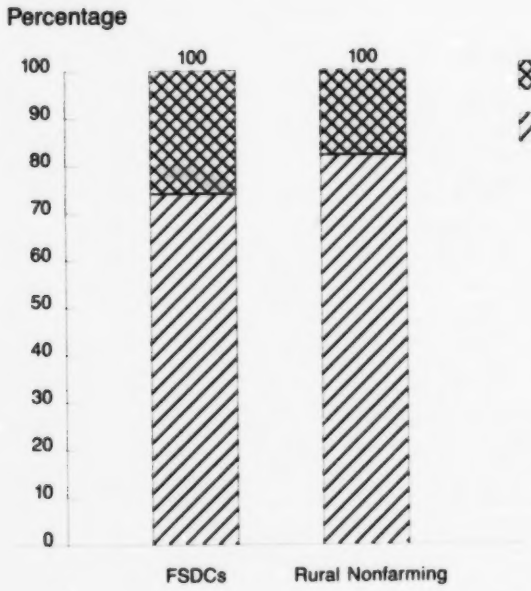
Paper & Allied



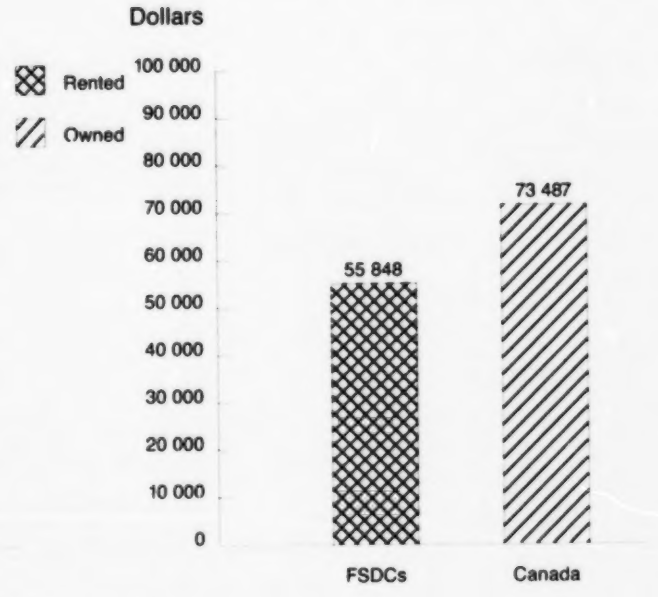
All FSDCs

Logging and forestry-dependent communities had the most university graduates with 6%; they also had the second highest proportion of residents without a high school diploma with 54%, the highest being in wood-dependent communities with 58%. University graduates in wood-dependent communities represented only 3% of the population.

Housing Tenure

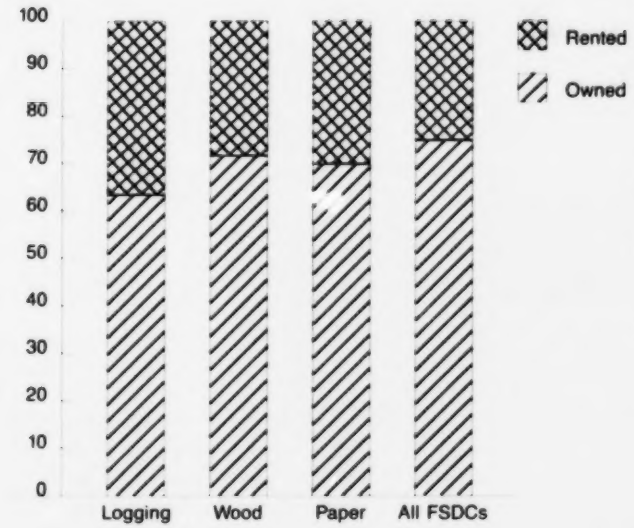


Average Value of Dwellings

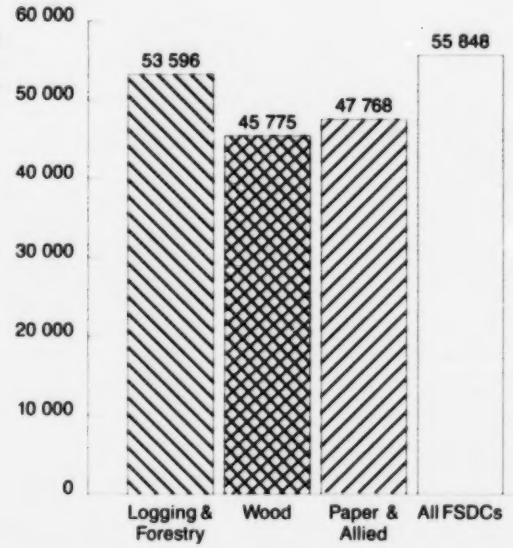


There were less home owners in FSDCs than in other rural nonfarming communities in Canada. The average value of dwellings was also considerably lower in FSDCs than in all communities in Canada. The average was 76%. Caution must be used here, however, since the high cost of houses in urban areas, especially in centres such as Vancouver and Toronto, have the effect of increasing the provincial average.

Housing Tenure by Subsector

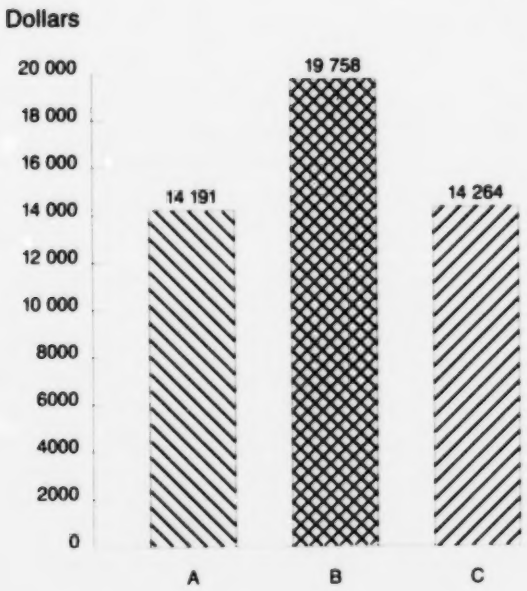


Average Value of Dwellings by Subsector



In logging and forestry-dependent communities, the proportion of home owners was lower relative to the other two subsectors while the value of dwellings was higher. The reverse was true for the wood and paper and allied-dependent communities, i.e. more owners, lower value homes. In all FSDCs (including the mixed), however, there was a larger proportion of owners in spite of the high value of dwellings.

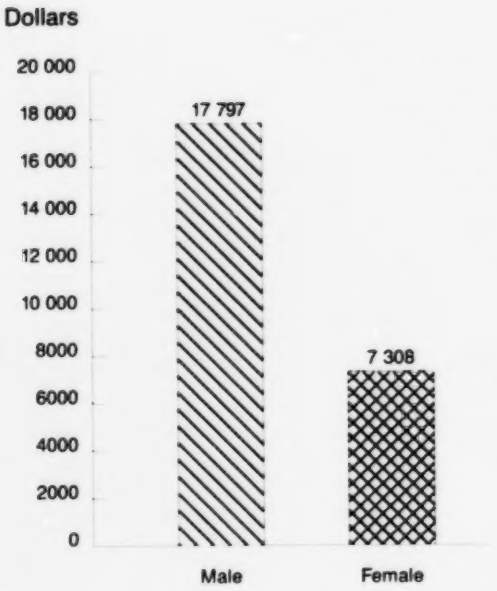
Average Income



(A): All workers in FSDCs.
(B): Forest sector workers in FSDCs.
(C): All workers in Canada.

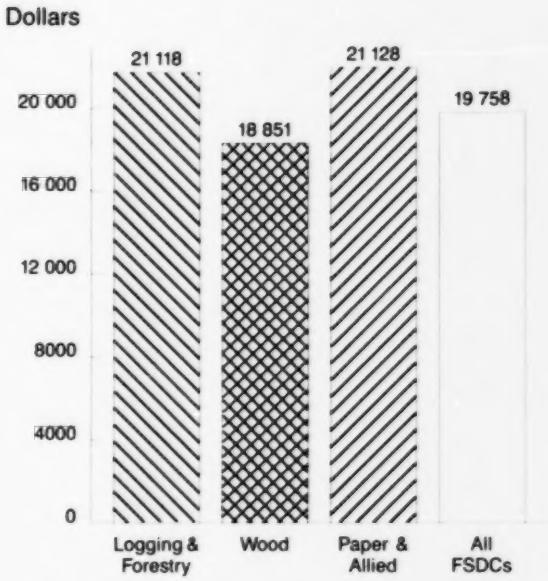
Forest sector workers in FSDCs earned considerably more than the average Canadian worker (38% more). They also earned more on average than other workers in the same community.

Average Income Male vs Female



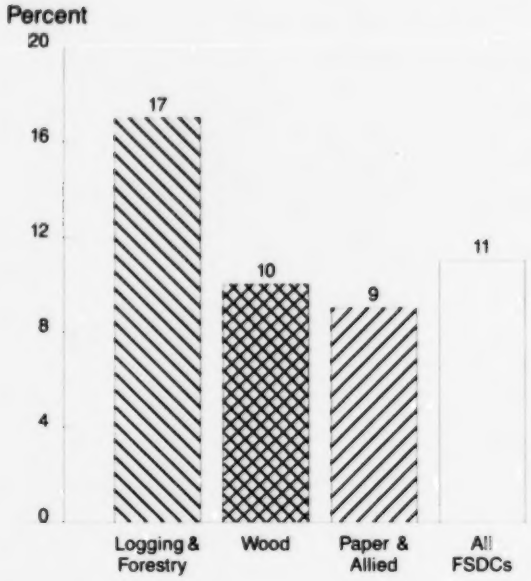
Men earned 2.5 times more than women in FSDCs. This can be partly explained by the male dominance in the forest sector and the higher salaries associated with the industry. Women may have worked mainly in the service industry where salaries are lower.

Average Income by Subsector



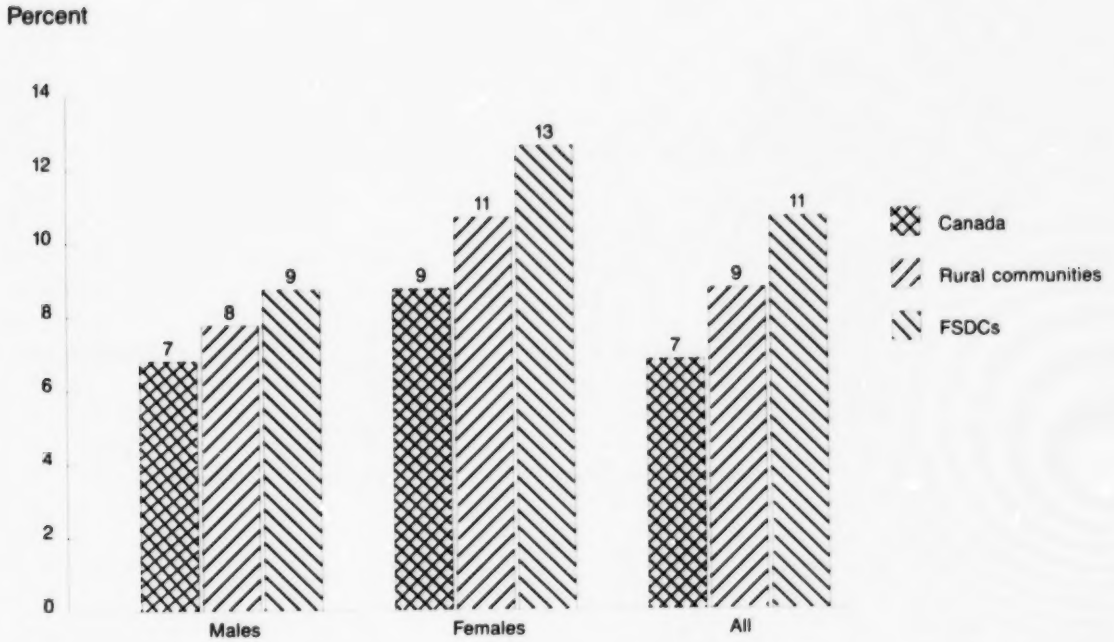
Workers in wood-dependent communities earned slightly less than their counterparts in the other two subsectors.

Unemployment Rate by Subsector



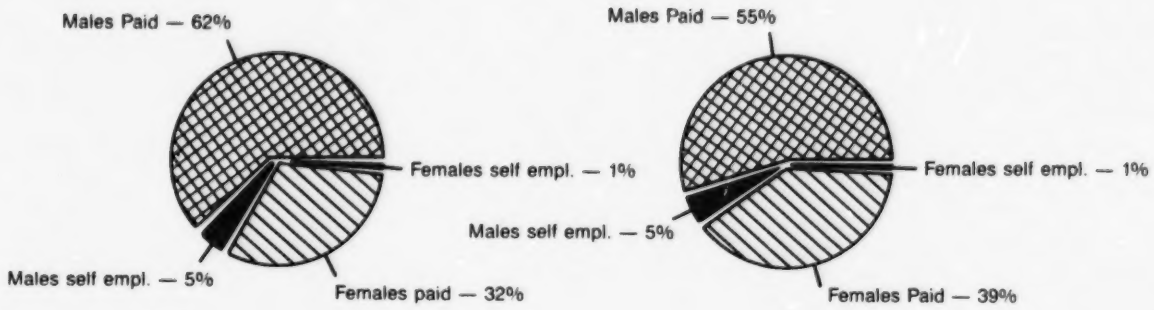
The unemployment rate in logging and forestry-dependent communities was almost double that in paper and allied-dependent communities.

Unemployment Rate Male vs Female



The unemployment rate in FSDCs was slightly higher than in rural communities in Canada, where the rate was in turn, also slightly higher than the unemployment rate in Canada. The unemployment rate for women was higher than for males.

Class of Worker

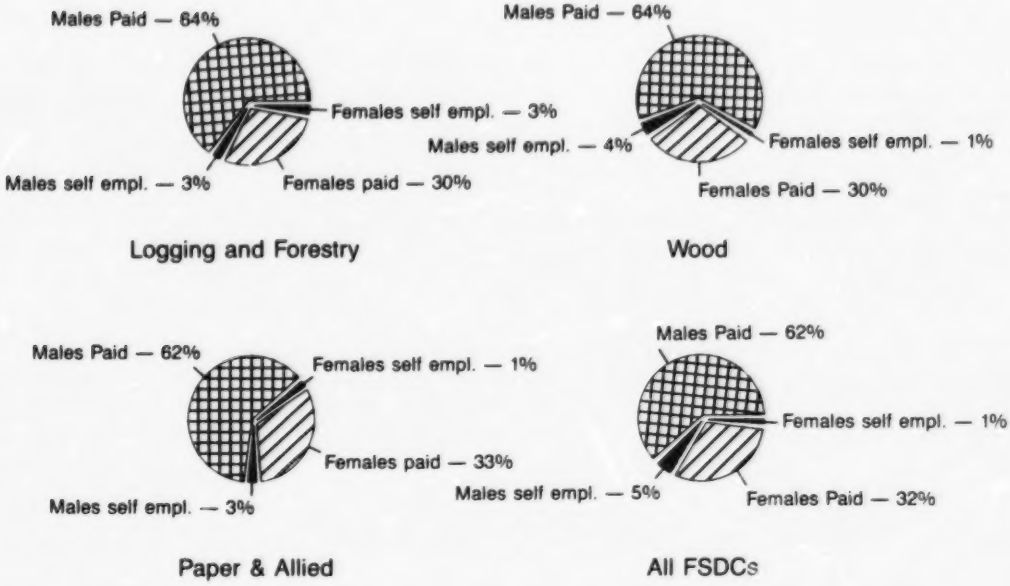


Males Paid — 62%
Females self empl. — 1%
Males self empl. — 5%
Females paid — 32%
Males Paid — 55%
Females self empl. — 1%
Males self empl. — 5%
Females Paid — 39%

FSDCs Canada

Females represented 40% of the workforce in Canada, but only 33% in forestry and logging-dependent communities. Note that the proportion of self-employed workers, both male and female, was identical for FSDCs and Canada in general.

Class of Worker by Subsector



Males Paid — 64%
Females self empl. — 3%
Males self empl. — 3%
Females paid — 30%
Logging and Forestry
Males Paid — 64%
Males self empl. — 4%
Females self empl. — 1%
Females Paid — 30%
Wood
Males Paid — 62%
Females self empl. — 1%
Females paid — 33%
Males self empl. — 3%
Paper & Allied
Males Paid — 62%
Females self empl. — 1%
Males self empl. — 5%
Females Paid — 32%
All FSDCs

Although the proportion of self-employed workers in all FSDCs was equivalent to the Canadian average, it was lower in the communities that relied on the wood and paper and allied industries.

Conclusion

With the federal government's emphasis on regional development and its increasing concern over the plight of single-industry towns, better knowledge and understanding of forest sector-dependent communities is increasingly in demand. Building this database was the first step in filling this information gap.

The information on the population in those communities has given us a better appreciation of their size and could be useful in determining the communities' potential for expansion or decline as well as the need for services such as schools, hospitals, retirement homes, etc. The evidence of low levels of formal education could help to determine the type and extent of training or retraining required should a community be faced with mass layoffs or shutdown. Because forest sector workers earn a high income relative to workers in other industries the adjustment to a reduction or loss of income could be more severe for forest-sector workers. Furthermore, they have benefited from somewhat lower costs for housing than other workers. This suggests a fairly high standard of living and therefore could make the prospect of mobility very unattractive. The information on the proportion of the self-employed to the paid workers indicates that the level of entrepreneurship in these communities is equivalent to the Canadian average.

The differences in the characteristics of the three subsectors were also of note. Logging and forestry-dependent communities had the lowest population of FSDCs; they had the highest proportion of children and lowest number of 65 years and over; there were fewer home owners; they also experienced the highest unemployment rate of all three subsectors; and interestingly enough, they had more university graduates than the other two subsectors.

The residents of communities dependent on the wood industry tended to earn less than the residents in logging and forestry and paper and allied-dependent communities. They also had a lower level of education.

The communities reliant on the paper and allied industry had the highest population of the FSDCs. The average salary was higher in those communities and the unemployment rate was lower. More women were active in the labour force as well.

This paper has illustrated how FSDCs differed from other communities in 1981. Much more work remains to be done, however, to understand these differences, to register the fluctuations in their characteristics over time and to examine the implications of federal policies as they relate to single-industry communities' economic health.

Appendices

Appendix 1

Methodology

Methodology

The 1981 Census data were used to determine the percentage of the labour force for each community that consisted of employees in the four related Standard Industrial Classification (SIC) forest sector groups (logging, forestry services, wood industry, paper and allied industry). Definitions of these classifications are found in Appendix 4. For communities of 9999 or less inhabitants, a community was considered to be forest sector-dependent if the percentage of the labour force in the SIC groups devoted to the forest sector was 30% or greater. For communities with a population between 10 000 and 29 999, 25% was used; and for those of 30 000 or more, 20%.

The lower percentages used as the population range increases are due to the greater nonbasic sector generated by a larger community. Therefore, as a subdivision grows, more services and goods are locally produced, resulting in more employment in nonbasic activities.

Note: Census Subdivisions were used as the statistical basis on which to collect information, and for the purpose of this paper, are referred to as communities, even though one statistical entity could represent a number of unincorporated places (PL). An unincorporated place refers to any cluster of five or more permanently occupied dwellings locally known by a specific name but not having a local government.

Appendix 2

Lists of Forest Sector-Dependent Communities

Lists of Communities that Relied on the Forest Sector for Their Livelihood in 1981

Legend

1. Census Subdivisions — Type

Census subdivisions, as defined by Statistics Canada, include the following types of communities:

BOR — Borough
C — City - Cité
CM — County (Municipality)
COM — Community
CT — Canton (Municipalité de)
CU — Cantons unis (Municipalité de)
DM — District (Municipality)
HAM — Hamlet
ID — Improvement District
LGD — Local Government District
LID — Local Improvement District
LOT — Township and Royalty
MC — Municipal Corporation
MD — Municipal District
PAR — Parish
P — Paroisse (Municipalité de)
R — Indian Reserve - Réserve indienne
RM — Rural Municipality
RV — Resort Village
SA — Special Area
SCM — Subdivision of County Municipality
SD — Sans désignation (Municipalité)
S-E — Indian Settlement - Établissement indien
SET — Settlement
SRD — Subdivision of Regional District
SUN — Subdivision of Unorganised
SV — Summer Village
T — Town
TP — Township
UNO — Unorganized - Non-organisé
V — Ville
VL — Village

2. Census Subdivisions — Changes

Some CSDs have undergone changes since 1981. The following codes indicate the type of change.

1. Incorporation
2. Change of Name
3. Change of Status
4. Dissolution
5. Part Annexed (Receiving Entity)
5A. Complete Annexation
6. Part Annexed (Losing Entity)
7. Revisions of Standard Geographical Classification Code
8. Boundary Revisions (Receiving Entity)
9. Boundary Revisions (Losing Entity)

3. Bold — indicates communities of 1 000 people or more.

List I
Forest Sector Dependent Communities (1981)

For communities with a population of 9 999 or less, a community was considered to be forest sector dependent if the percentage of the labour force devoted to the forest sector was 30% or greater. In the case of communities with a population between 10 000 and 29 999, the forest labour force had to represent 25%, and 20% for the communities of 30 000 or more.

Appendix 4

Definitions

Definitions

A. The different subsectors of the forest industry, i.e. "logging and forestry," "wood," and "paper and allied," are defined in the Census according to Statistics Canada's Standard Industrial Classification (1960). Further details can be found in Catalog No. 12-501E.

LOGGING INDUSTRY - (MAJOR GROUP 04)

Logging Industry

Establishments primarily engaged in producing roundwood whether on an own-account or on a contract basis. Included are establishments primarily engaged in the combined activities of driving, booming, sorting and rafting and towing of wood. Barking mills are also included. Establishments primarily engaged in transporting wood with motor vehicles, including specialized logging trucks, are classified in **4565 — Forest Products Trucking Industry** and those primarily engaged in towing logs are classified in **4563 - Marine Towing Industry.**

FORESTRY SERVICES INDUSTRY - (MAJOR GROUP 05)

Forestry Services Industry

Establishments primarily engaged in gathering forest products; in forestry patrol, fire fighting; in forest nurseries, reforestation and other forestry services. Forestry farms and timber crop operations are included here. Forestry consultants working on their own account are classified in **7752 - Offices of Engineers.** The gathering of maple syrup is classified in **0169 - Other Horticultural Specialties.**

WOOD INDUSTRIES - (MAJOR GROUP 25)

Sawmill, Planing Mill and Shingle Mill Products Industries

Establishments primarily engaged in manufacturing lumber, both rough and dressed, shingles and other sawmill or planing mill products. Establishments primarily engaged in manufacturing hardwood flooring and millwork products other than lumber are classified in **Industry Group 254 - Sash, Door and Other Millwork Industries.**

Veneer and Plywood Industries

Establishments primarily engaged in manufacturing hardwood and softwood veneer and plywood. Plywood is classified by the type of wood on the best face; the core may be veneer, plywood, particleboard or lumber. Establishments primarily engaged in overlaying one surface only of particleboard are classified in **2592 - Particleboard Industry.**

Sash, Door and Other Millwork Industries

Establishments primarily engaged in manufacturing prefabricated wooden buildings; wooden kitchen cabinets and bathroom vanities; wooden doors and windows; and other millwork products not elsewhere classified. Establishments primarily engaged in producing rough or dressed lumber are classified in **2512 - Sawmill and Planing Mill Products Industry (except Shingles and Shakes)**.

Wooden Box and Pallet Industry

Establishments primarily engaged in manufacturing wooden boxes and pallets. Establishments primarily engaged in manufacturing wooden barrels are classified in **2599 - Other Wood Industries n.e.c.**

Coffin and Casket Industry

Establishments primarily engaged in manufacturing coffins, caskets and other morticians' supplies.

Other Wood Industries

Establishments primarily engaged in treating wood products against decay; manufacturing particle and waferboard; wooden, turned and shaped forms; and other products of wood not elsewhere classified.

PAPER AND ALLIED PRODUCTS - MAJOR GROUP 27

Pulp and Paper Industries

Establishments primarily engaged in manufacturing pulp, paper, paperboard and building and insulation board. Establishments primarily engaged in manufacturing converted paper and paperboard products are classified in **Industry Groups 273 - Paper Box and Bag Industries** or **279 - Other converted Paper Products Industries.**

Asphalt Roofing Industry

Establishments primarily engaged in manufacturing asphalt saturated roofing and siding materials.

Paper Box and Bag Industries

Establishments primarily engaged in manufacturing folding cartons and setup boxes; corrugated boxes; paper bags; and other paper containers not elsewhere classified.

Other Converted Paper Products Industries

Establishments primarily engaged in coating and treating paper and paperboard, manufacturing stationery paper products, paper consumer products and other converted paper products not elsewhere classified. Many of these establishments also use synthetic materials and metal foil to produce articles similar to those manufactured of paper and paperboard.

B. The following are the definitions of the various concepts, universes and variables used in the 1981 Census. For further information, refer to Statistics Canada's Catalog 99-901 "1981 Census Dictionary."

AGE

Refers to age at last birthday (as of the census reference date, June 3, 1981). This variable is derived from date of birth.

Reported for: Total population.

CENSUS SUBDIVISION (CSD)

Refers to the general term applying to municipalities, Indian Reserves, indian Settlements and unorganized territories.

In Newfoundland, Nova Scotia and British Columbia, the term also describes geostatistical areas that have been created by Statistics Canada in cooperation with the provinces as an equivalent for municipalities.

Remarks: The 1981 Census was taken according to the municipal boundaries in effect on January 1, 1981.

CLASS OF WORKER

Refers to the classification of employment of persons 15 years of age and over, excluding inmates, according to whether a person mainly worked for someone else for wages, salaries, commission or payment in kind, or worked without pay for a relative who is a member of the same household in a "family farm or business," or mainly worked for himself or herself with or without paid help, in the job reported. The job reported was the job in the week prior to enumeration if employed, or the job of longest duration since January 1, 1980 if not employed during the reference week. Persons with two or more jobs in the reference week were to give the information for the job at which they worked the most hours. This is a derived variable.

Required for: Population 15 years of age and over, excluding inmates, who worked since January 1, 1980.

INCOME: AVERAGE INCOME

Refers to the weighted mean total income per unit of a particular group. Average income is calculated from unrounded data by dividing the aggregate income of the group by the number of units in that group.

POPULATION SIZE GROUP OF CURRENT PLACE OF RESIDENCE

Refers to the population size group of the Census Subdivision where the person currently resides.

SCHOOLING, HIGHEST LEVEL OF

Refers to the highest grade or year of elementary or secondary school attended, or the highest year of university or other non university completed. University education is considered to be above other nonuniversity. Also, the attainment of a degree, certificate or diploma is considered to be at a higher level than years completed or attended without an education qualification.

Reported for: Population 15 years of age and over, excluding inmates.

UNEMPLOYMENT RATE

Refers to the percentage the unemployed force forms of the total labour force (in reference week) in an area, group, or category. This is a derived variable.

Reported for: Population 15 years of age and over, excluding inmates.

VALUE OF DWELLING

Refers to the amount expected by the owner if the dwelling were to be sold.

Reported for: Owner-occupied, nonfarm dwellings.
